### MESSAGE

I am extremely happy to learn that Department of Geology, D.D. Autonomous College, Keonjhar, Odisha is going to publish a Special Volume of their journal on earth system science, the 'GeoChronicle Panorama', on Sequence Stratigraphy and Seismic Stratigraphy, under the able guidance of Prof. B. Mishra. The annual journal 'GeoChronicle Panorama' has been an excellent source of knowledge for the students and geoscientists in popular, research and review articles on Earth, Ocean, Planetary and Environmental Sciences including disaster management, sustainable development, modern exploration techniques etc. since the year 2012.

The current volume of 'GeoChronicle Panorama' focuses on Sequence Stratigraphy and Seismic Stratigraphy which are very important for sedimentary basin analysis, correlation of sedimentary basins and understanding the hydrocarbon reservoirs. I am sure, this volume will enlighten the researchers and geoscientists working in the related fields and also ignite the interests of students about these subjects.

I congratulate and extend my best wishes to the whole editorial team and readers of the journal.

  
(RAJENDRA SINGH GARKHAL)
